De novis libris iudicia

Kunitzsch’ book is a comprehensive manual on the different Arabic versions of the astronomical Syntaxis of Ptolemy, including the translation from Arabic into Latin by Gerhard of Cremona (the two existing translations from Greek into Latin are considered only in passing). As such it is a very notable contribution to the history of learning. The synoptic Catalogue of stars, with comments and indexes (p. 165-370), is probably its most important part, but the reader will find a mass of information and interesting notes throughout the book. From the philological point of view the terminological and syntactical difficulties faced by the Arabian translators — and the poor performance of Gerhard — deserve particular notice. H. Thesleff

Gigante’s Italian translation of Diogenes Laertius first appeared in 1962. The new edition is thoroughly revised, the introduction is partly re-written and includes a useful essay ‘Per una interpretazione di D.L.’, and the notes (now all at the end of the second volume) have received numerous additions. The result is an up-to-date scholarly commentary to the text of Diogenes. Gigante discusses various points of textual criticism besides the interpretative notes; but he does not on the whole enter on the complicate questions of Diogenes’ sources. To write a 'full' commentary to Diogenes Laertius would be a quite impossible task owing to the wealth of disparate problems involved in this compilation and the dispersed treatment of them in modern special literature, and probably no two scholars would agree on the minimum amount of details worth commenting on. Gigante is notably well informed, and his references are usually well chosen and accurate. In view of what he has done it would be unfair to reproach him for his omissions. H. Thesleff

This new series opens with a study to commemorate the bimillenary of Varro. The analysis by Gelsomino of the concept the *septem colles* of Rome is useful in many ways: it not only discusses the origin of the concept, but also its presentation by many Roman authors and the variations in the meaning of the concept. Gelsomino has a solid, as he calls it, geomorphological basis. But one is perhaps entitled to certain doubts concerning the main thesis of the study, that the origin of the concept must be sought in Varro's *L.L.* 5,41-54; I agree that the feast Septimontium is the decisive argument in the matter, but I do not care for the hypothesis of Adams Holland, that the real name of the feast was Saeptimontium and that Varro, using a false etymology, was the first to connect it with *septem*. I would have expected a more comprehensive discussion of the nature and origin of this feast by Gelsomino, and see in this the worst deficiencies in an otherwise complete list of modern works on the subject (why has e.g. Gjerstad's Early Rome not been consulted?).

*Jorma Kaimio*

This is a penetrating and profound reappraisal of the eventful final year of Cicero's life, viewed in the light of his correspondence. María Bellincioni deals not only with the specifically political aspects of Cicero's activities in 44-43 B.C. to which the title refers, but also more generally with his personality "nella pienezza della sua umanità" (Preface, p. 7). The body of the book, "I fatti," is preceded by a survey of Cicero's basic ideas, "Le idee". Most of this interesting first part is devoted to the conceptions of *pax*, *libertas* and *concordia* (pp. 13-45) and to a characterization of *optimus civis* (pp. 47-85). The tragedy of Cicero, who was repeatedly faced with the task of readjusting his high ideals to conform with a rapidly changing reality, is presented with great clarity (e.g. p. 31). Stylistically Bellincioni's book is remarkably good, although on occasion unnecessarily prolix (p. 31, referred to above, provides an example of admirable terseness).

The new Budé edition of Apicius' cookery book by Jacques André is, in its essential points, the same as the first edition published in 1965 (*Études et Commentaires* 58), although it includes due acknowledgement of the most recent studies. André's text (like that of M. E. Milham's Teubner edition, Leipzig 1969) is based on MSS. E and V — or rather V and E, to emphasize the superiority of V in that almost all other extant MSS depend on it. The detailed commentary on pp. 133-214, scientifically more reliable than that of the edition by B. Flower and E. Rosenbaum (London 1958), is of that order of excellence that one has been led to expect from the author of L'alimentation et la cuisine à Rome (*Études et Commentaires* 38, Paris 1961). The Indices are outstanding as such, although one questions whether the division into as many as five separate parts is the most feasible solution; for instance, the fact that *acetabulum* is found on p. 217 (among the measures) as well as on p. 224 (among the utensils) may disconcert the reader.
